

# Pro Meter

Simple, Dependable, Economical.

Water thin to very viscous materials are metered and dispensed accurately.

Conical reservoirs allow more efficient use of your material.

Available with Electronic Shot Size Controller, Heaters, and many other options.

Versatile Ratio Adjustment System allows for simple accurate ratio adjustment.

Each Pro Meter comes preset within one of four ratio ranges and is fully adjustable within that range.

As always, the Pro Meter comes with Michael Engineering's proven, durable, and accurate pumps.

The **Pro Meter** is a compact bench top meter mix dispense system with big machine features. It is capable of delivering up to 10 lbs. of mixed resin per minute. The **Pro Meter** is powered by an air cylinder operating two piston pumps, that supplies properly proportioned material to the mixer. At the mixer, the materials are blended together and dispensed. All the controls are pneumatic and no electricity is required. The machine will pump automatically as long as the run switch is pressed. The **Pro Meter** uses high tech, abrasive resistant, piston pumps with hardened parts and wear take up seals for long life. It can pump any self-leveling material. Even water thin materials are metered and dispensed accurately. The **Pro Meter** can be configured to deliver a continuous output of up to 10 lbs./min or single shots adjustable from 5cc to 169cc.
