

Pump-kin Vertical

Simple, Dependable, Economical.

Solvent cup extends pump life, reduces maintenance, and protects the pump piston rod and seals from damage by extremely moisture sensitive materials.

Conical reservoirs allow more efficient use of your material.

Available with electronic shot size controller, heaters, and many other options.

Versatile ratio adjustment system allows for simple accurate ratio adjustment.

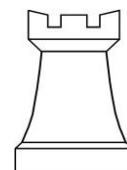

Water thin to highly viscous materials are metered and dispensed accurately.

As always the Pump-kin comes with Michael Engineering's proven, durable, and accurate pumps.

The **Pump-kin** is a compact bench top meter mix dispensing system. All the controls are pneumatic and no electricity is required. The **Pump-kin** uses high tech, abrasive resistant, piston pumps with hardened parts and wear take up seals for long life. It can pump any self-leveling material. The **Pump-kin** comes standard with a mixer gun that uses disposable static mixers. We also include a variety of spare parts and easy access to technical help. Each **Pump-kin** comes preset within one of four ratio ranges and is fully adjustable within that range. Call for price and availability.
