

Sticky Stuff Dispenser

Ideal for individual craftsmen and professionals alike, the **Sticky Stuff Dispenser** is a practical engineering tool specially designed to eliminate the sticky, messy, costly hand proportioning of epoxy resins. A highly dependable, top-quality system, the **Sticky Stuff Dispenser** assures accurate measurement of resin and hardener with a minimum of supervision.

Durable and long lasting because it is made with polished steel pistons, an aluminum body, hardened, ground and polished bearings, a stable laminated base and a carrying handle for your convenience.

The **Sticky Stuff Dispenser** holds the material in clear plastic reservoirs, measures the resin and hardener, and puts it into a container of your choice keeping you **safer** and your clothes and counter **cleaner**.

The **Sticky Stuff Dispenser** is a hand operated meter machine. It comes in two models:

- **Model A** is an adjustable, split body pump. Made in one of three ratio ranges (100:35-100 or 100:17-65 or 100:8-28) it comes preset to your specified ratio and is fully adjustable within its range. Maximum viscosity is up to 5000 cps. It meters up to one quart of unmixed two part resin per minute.
- **Model B** is a larger version of the Model A, and can meter up to three to four quarts of unmixed two part resin per minute at 45cc per shot. Options include: mixer, heater, reservoir size, iso oilers.

Preset at the factory, it's ratios are **accurate**. **You save material** because you pump just what you need-from a drop to a cup. **You save money** because you are not throwing away unused mixed material. **You save energy and time** by getting to your project sooner in stead of pouring, measuring, mixing, then having to clean the container, counter, your clothes and hands every time you need some mixed material.

LIMITED WARRANTY: Michael Engineering / Rook Metering Equipment, Inc. warrants our products to be free from defects in materials or workmanship for a period of 90 days. We will, at our discretion, repair, replace or take back any equipment that becomes defective or does not perform to specification within this time period; except in cases of abuse, neglect or improper operation. Depending on the situation, returns may be subject to a 15% restocking fee.
